KEYWORDS

COVID-19; long COVID; post-COVID-19 condition; postacute sequelae of COVID-19; PASC; psychiatry; epidemiology; evidence-based medicine

This is a peer-review report submitted for the paper "Postacute Sequelae of COVID-19 and Adverse Psychiatric Outcomes: Protocol for an Etiology and Risk Systematic Review."

Yes.

Is the study design appropriate?

Yes.

Are sufficient details provided so that the method can be replicated?

Yes.

Are datasets available so that others could use them?

Not applicable.

Round 2 Review

General Comments

The authors lay out a reasonable protocol for this type of investigation [1].

Serious Concerns

Do you have any serious concerns about the manuscript such as fraud, plagiarism, unethical or unsafe practices?

No.

Have authors' provided the necessary ethics approval (from authors' institution or an ethics committee)?

Yes.

Language Quality

How would you rate the English language quality?

High quality.

Validity and Reproducibility

Is the reasons for conducting the study and its objectives clearly explained?

Suggestions

Based on your answers in section 3 how could the author improve the protocol?

It is appropriate as it is.

Do you have any other feedback or comments for the Author?

The authors lay out a reasonable protocol for this type of investigation that is based on a fairly standard approach with the standard GRADE grading approach.

Decision

Verified manuscript: The content is scientifically sound, and only minor amendments (if any) are suggested.

Conflicts of Interest

None declared.

Editorial Notice

This paper was peer-reviewed by the Plan P Hashtag Community partner #PeerRef.
